PROFESSIONAL SUMMARY

Computer Science student at the University for Development Studies (UDS) with a strong foundation in frontend development using HTML, CSS, JavaScript, TypeScript, and React. Experienced in building practical software products including fintech-oriented prototypes, educational applications, and productivity tools. Currently expanding into Python, backend development, databases, REST APIs, and AI/LLM integration while pursuing software engineering, frontend, full-stack, and early-career AI development internship opportunities.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Python (developing), SQL (developing)

Frontend: React, Vite, Responsive Web Development

Backend & APIs: Backend Development Fundamentals, REST API Concepts

Databases: SQL, Database Development Fundamentals

Tools: Git, GitHub, Vercel

AI & Development: AI/LLM API Integration, Prompt Engineering

SELECTED PROJECTS

MoMo Merchant Intelligence (MoMoMI)

React, TypeScript, Vite, Git

- Independently developed a fintech-oriented product prototype exploring categorization and analysis of MTN MoMo income and expense activity.
- Designed Money In, Money Out, Inventory, Analytics, Product Confirmation, and Business Pulse modules.
- Implemented transaction categorization, product-confirmation, and inventory-tracking workflows.
- Demonstrated frontend architecture, state management, business workflow modeling, analytics interfaces, and product thinking.

French Lab

React, TypeScript, Vite, Vercel

- Built a learning application around UDS French study materials under the concept “Study French without leaving your study material.”
- Developed document reading, text highlighting, translation assistance, vocabulary saving, and localStorage persistence.
- Integrated AI/API-assisted functionality into a practical frontend-focused learning workflow.

FlowBoard

React, TypeScript, Vite, Vercel

- Developed an individual-use Kanban task management application for personal productivity.
- Implemented drag-and-drop, keyboard-based task movement, task-state management, and persistence.
- Improved reliability by separating task state transitions from persistence logic and addressing task validation and filtered-board behavior.

EDUCATION

University for Development Studies (UDS)

BSc Computer Science | Expected Graduation: 2029

Relevant Coursework: System Analysis and Design; Fundamentals of Database Systems; Visual Programming with Visual Basic .NET

TECHNICAL TRAINING

- **PHA Laptop Scholarship Bootcamp Cohort 2.5** — Backend Development
- **TechCrush** — Web Development Training

ADDITIONAL EXPERIENCE

Built websites and web applications for construction-related and delivery-oriented businesses through practical software development engagements.
